

AUTOMATIC FLUSHER VALVE FOR DRIP LINE IRRIGATION SYSTEM

Synthetic foliage line
inifexTM

AUTOMATIC FLUSHER VALVES

- Easy to install
- Automatic flusher valves for viticulture and agriculture, allow the air to escape quickly from your dripper system and automatically shuts off when the water reaches the valve at the end of the line.
- Equally pressurising the entire dripper line at once, giving equal irrigation to all plants along the line.

- When the water pressure is turned off, the automatic flusher valve opens, allowing flushing of mud and grit with the drainage of your dripper system.
- Every time you turn on or off the water, the lines are flushed eliminating the need to walk your lines to open taps or untie/retie hose ends, saving valuable time, labour and money.
- Made from strong long-lasting UV stabilised material
- Pressure flushing of lines is easily obtained by inserting the wedge supplied, into the valve if required.
- Spiral fast tension ties can be used to fasten valve at the end of your dripper line to the support wire.

**Dont get sludged up
SAVE ON WATER, LABOUR
& MAINTENANCE**

Flusher Valve Sizing

Flusher Valves available in FOUR sizes to fit following interior diameter hose sizes:

CODE	Size (to suit ID)
AFV 001	1/2 inch - 13 mm
AFV 002	9/16 inch - 15 mm
AFV 003	5/8 inch - 16-17 mm
AFV 004	3/4 inch - 19 mm

Spiral Fast Attaching Wires to attach Flusher Valve to irrigation system:

SFA 001 - made from heavily galvanised steel with a gritted coating - to tightly grip wire.

They are designed to hold the Flusher Valve at the end of the dripper line, and tension the dripper line to the support wire.
